Website Project Proposal

Nebusiwe Wellness Centre

1. Organisation Overview

- **Name:** Nebusiwe Wellness Centre
- Nebusiwe Wellness Centre was founded in July 2023 by founder Busisiwe Kwanyana, with the aim of bringing affordable, quality healthcare to the community.
- The vision and mission of the company is to improve the health and well-being of individuals, families and employees by providing professional, patient-centred healthcare services that are accessible, affordable and reliable. The Centre also aims to become the preferred community healthcare and wellness provider, delivering compassionate, affordable and high-quality healthcare services.
- **Target audience:** Families, private individuals and small businesses, government employees, senior citizens, students, and major companies in the surrounding area.

2. Website Goals and Objectives

Goals

- **Build an online presence:** give the Centre a professional, trustworthy digital home that reflects its patient-centred brand.

- **Generate leads and enquiries:** convert visitors into booked appointments and phone/email enquiries.
- **Enable online bookings:** let patients request or schedule appointments without having to call during business hours.
- **Provide reliable health information:** give patients easy access to service details, operating hours, location and health resources.
- **Increase reach and traffic:** attract new patients in the surrounding community through search engines and social media links.
- **Build trust and credibility:** showcase the founder's story, qualified staff and patient testimonials.

Key Performance Indicators (KPIs)

- Monthly website visitors and page views (tracked via Google Analytics).
- Number of appointment requests / bookings submitted through the site per month.
- Contact form and enquiry conversion rate (visitors who submit a form ÷ total visitors).
- Average session duration and bounce rate, as an indicator of content relevance.
- Percentage of traffic arriving via mobile devices, to guide ongoing optimisation.
- Patient feedback / satisfaction ratings collected through an on-site review or survey feature.

3. Current Website Analysis

Nebusiwe Wellness Centre does not currently have a website. Since opening in 2023, the Centre has relied primarily on word-of-mouth referrals and informal social media posts to reach patients.

Strengths of the current digital presence

- Strong, growing reputation and trust within the local community.
- Existing informal social media presence that can be linked to a future website.

Weaknesses

- No central, professional platform where patients can find information after hours.
- No online booking option — all appointments must be arranged telephonically.
- No search engine visibility, making it difficult for new patients to discover the Centre online.
- No way to formally showcase services, staff credentials or patient testimonials.

Areas for improvement

- Introduce a dedicated, mobile-friendly website with clear service and contact information.
- Add an online appointment request/booking system to reduce reliance on phone calls.
- Improve discoverability through basic search engine optimisation (SEO) and a Google Business listing.
- Build credibility through an About Us page, staff profiles and testimonials.

4. Proposed Website Features and Functionality

- **Homepage:** clinic overview, hero banner with key messaging, quick links to services and operating hours.
- **About Us:** the Centre's history, founder Busisiwe Kwanyana's background, mission and vision.
- **Services page:** a clear list of medical and wellness services offered, with short descriptions of each.

- **Contact Us page:** physical address with embedded map, phone number, email address.
- **Gallery:** where you can see our posters and pictures
- **Enquires:** a general enquiry form.

5. Design and User Experience

The design will reflect a calm, clean and trustworthy healthcare brand, reassuring patients while remaining simple and easy to navigate.

- **Colour Scheme:** a calming palette of oranges as the primary brand colour, paired with white—colours associated with healing, cleanliness and trust.
- **Typography:** a rounded, friendly sans-serif such as Poppins for headings, paired with a highly legible body font such as Open Sans, creating a clear visual hierarchy between headings and body text.
- **Layout and Design:** a clean, minimalist, mobile-first layout with generous white space, clear section headings and consistent navigation, avoiding visual clutter that could overwhelm patients.

User Experience Considerations

- Simple, consistent navigation menu present on every page (Home, About, Services, Book Appointment, Contact).
- Prominent, repeated call-to-action buttons for booking an appointment.
- Fast page-load times and mobile responsiveness, since many patients will browse on smartphones.
- High colour contrast and readable font sizes to support accessibility for senior citizens and patients with visual impairments.

6. Technical Requirements

- **Domain name:** a South African domain reflecting the brand, e.g. www.nebusiwewellness.co.za.
- **Hosting:** reliable local hosting (e.g. Xneelo or Afrihost) for good in-country load speed, backups and support.
- **Front-end languages:** HTML5, CSS3 and JavaScript for structure, styling and interactivity.
- **Content Management System:** a CMS such as WordPress is recommended so clinic staff can update service information, hours and blog posts without needing a developer.
- **Booking functionality:** a booking plugin/integration (e.g. a WordPress appointment-booking plugin) connected to email notifications.
- **Security:** an SSL certificate for encrypted connections, and POPIA-compliant handling of any personal information collected through forms.
- **Responsiveness:** a mobile-first, responsive build tested across common screen sizes and browsers (Chrome, Safari, Edge, Firefox).
- **Analytics:** Google Analytics and Google Business Profile integration to track traffic and local search visibility.

7. Timeline and Milestones

The project is planned over an 8-week period, broken into the following phases:

Phase	Milestone	Duration
Discovery & Planning	Client briefing, requirements gathering, sitemap and content plan finalised	Week 1
Wireframing & Design	Low-fidelity wireframes and visual design (colours, typography, mock-ups) approved	Weeks 2–3
Development	Website built on chosen CMS/framework; booking form integrated	Weeks 4–5
Content Population	Service descriptions, images, staff bios and copy added to the site	Week 6
Testing & QA	Cross-browser, mobile and functionality testing (forms, booking, links)	Week 7
Launch & Handover	Site goes live; staff training on CMS; documentation handed over	Week 8

8. Budget

The following is an estimated once-off and recurring budget for the project, based on typical South African small-business web pricing:

Item	Description	Estimated Cost
Domain registration	Once-off registration, renewed annually	R150 – R300 / year
SSL certificate	Often bundled free with hosting	R0 – R500 / year
Website design & development	Custom CMS build (5–8 pages) as outlined above	R15 000 – R35 000 once-off
Item	Description	Estimated Cost
Booking system integration	Appointment plugin/setup	R0 – R2 000 onceoff/annual
Ongoing maintenance & support	Updates, backups, security monitoring	R500 – R1 500 / month

Total estimated first-year investment: approximately R20 000 – R45 000, covering setup and the first year of hosting, domain and maintenance. Costs may vary depending on final feature scope and chosen service providers.
